

How to Run SCOOP Parser

- The Parser is built in Visual Studio 2010, C#. It is a Console based application.
- Download the parser project, "scoop.zip".
- Unzip scoop.zip; it will give the "scoop" folder which contains the project.
- In order to open the source code of parser, you should have Visual Studio 2010 installed on your machine.
 - After Visual Studio 2010 is installed on your machine, double click the project file at.
../scoop/scoop/scoop.csproj
 - The source code text file "source.txt" should be in the following folder.
../scoop/scoop/debug/bin/source.txt
 - Now project has loaded in the Visual Studio IDE, you can run the project
- In order to run the executable file of parser, you should have Microsoft.Net framework 4 installed.
 - Download and install .Net Framework from the link below.
<http://microsoft-net-framework-4.en.softonic.com/download>
 - OR
<https://www.microsoft.com/en-ca/download/details.aspx?id=17851>
 - The source code text file "source.txt" should be at the path below.
../scoop/scoop/debug/bin/source.txt
 - Double click the "scoop.exe" file from the path below.
../scoop/scoop/debug/bin/scoop.exe
